```

The invention describes a method of screening a candidate antifungal CC compound for interaction with essential proteins (EP) or for modulation CC of EP activity e.g fungal gene transcription. The proteins tested in the CC invention include RPC34, POP3, TFR2, NAB2, MPT1, MTR2, BOS1, POL30, RSA2, CC SQT1, MTW1, TFB1, SPC98, BFR2, RNA1, GCD7, SKI6, NIP1, LCP5, NCE103, CC ECO1, ORC2, CNS1, YPD1, TIM10 and SRB4 from S. cerevislae, C. albicans CC and human homologues. The method involves contacting a culture with one CC viability of the culture of cells which preferably comprises fungal cells or yeast cells. Preferably the identified compounds interact with, or CC compounds identified by the method are useful for preventing or in a CC manmal. The antifungal agents interact with sesential fungal elements CC that can be used to treat fungal infection by preventing the growth and CC preferentially killing the fungal infection by preventing the bological activity of mammalian homologues. This amino acid sequence represents a CC method of the invention.

Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic Activity, career disgnosis and therapy, drug screening, and thrombolytic activity, career disgnosis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   assays for receptor activity, arthritis and C.N.S disorders.

         CC regeneration, revascularization and would recurred to disease and CC neurodegenerative disease, acute transmatic injury, fibrotic disease and CC autoimmune diseases (e.g. rheumatoid arthritis and sclerosis). The UNC-53 CC polynucleotides can be used for recombinant production of the proteins, CC as a source of probes for detecting allelic variants and polymorphisms, CC source of therapeutic antisense sequences. Cells that expression; and as course of therapeutic antisense sequences. Cells that express the CC and migration. They can also be used to identify proteins that are CC involved in signal transduction pathways also involving UNC-53, and to identify compounds that alter attachment of UNC-53 to microtubules. A CC target gene coupled to a UNC-53 encoding sequence may be used to deliver the target gene to a cellular microtubule or its plus ends. The present CC sequence represents the amino acid sequence of the second human homologue CC of UNC-53, designated hs-UNC-53/2.
                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides vertebrate (human) protein homologue of a UNC-53 protein of Caenorhabditis elegans. The UNC-53 binds to microtubules or their plus ends. The UNC-53 sequences are used to promote neural regeneration, revascularization and wound healing; also for treating neurodegenerative disease, acute traumatic injury, fibrotic disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               UNC-53; Caenorhabditis elegans; microtubule; neural regeneration; anticancer; anti-neurodegeneration; antifibrotic; anti-adhesive; hantisclerotic; antimetastatic; anti-arthritic; autoimmune disease.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

NOTE: This is a 'working draft' sequence. It currently consists of 79 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                as soon as in be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 79 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

10810 10909: gap of 178 bp in length
10810 10909: gap of 100 bp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chemistry: Dye-terminator Big Dye; 100% of read Assembly program: Phrap; version 0.960731 Consensus quality: 200414 bases at least Q40 Consensus quality: 203403 bases at least Q30 Consensus quality: 204607 bases at least Q20 Insert size: 210000; agarose-fp Insert size: 205214; sum-of-contigs Quality coverage: 7.0 in Q20 bases; sum-of-cont Quality coverage: 7.1 in Q20 bases; sum-of-cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Center clone name: 54_L_1

                     NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Gen/bank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
